

Education and training (Kingspan Academy)

Optimal installation secures that the supply to our customers lives up to contemporary demands. It is essential that each component in the pipe system is handled and fitted correctly. There is no point in having pre-insulated quality pipes on the market from the perspectives of heat loss and service life if the joint installation is not of the same quality.

What's in it for you? We offer simple ways to save your money! We experience too often that without correct education and training our joints and alarm wires are installed incorrectly – leading to tremendously high repair costs. The best and educated installers do it right the first time.

DEMAND THE BEST

To secure perfect use and installation of the LOGSTOR pipe system we offer education and training.

To complete proper installation or supervision on the job site, it is our wish that our customers will require that any installation of LOGSTOR products will be completed by certified installers and that the end customer or their advisor complete the LOGSTOR Academy supervision training.

We are essential for proper installation efficiency, long life of the pipe systems and a minimum of claims. The LOGSTOR Academy concept is perceived among the best in the business. So, for superior installation, you simply must **demand the best!**

We create value

The courses provided by LOGSTOR Academy secure the probability for the customer of having flawless network. We minimize the risk of failure due to wrong design, handling, and installation. And equally important, this is the prerequisite that the lifetime of the network will be as expected.

LOGSTOR offers technical consultancy and support both in the planning and execution face. Our skilled and experienced Technical Design Departments can help with several tasks, such as:

- **Joint fitters** educated, trained and certified in **optimal and correct use** of the LOGSTOR system are the basis for **a long lifetime with flawless operation** of the pipe network without repairs and breakdowns.
- **Kingspan Academy** setup in Denmark, UK, Poland, the Netherlands, and Germany.
- The standard courses offered are
 - **Design** of pipe system -for engineers.
 - **Installation of joints** including alarm wires and general handling of components during installation - for fitters.
 - **Supervision and control** - for engineers/supervisors.
 - Operation of **LOGSTOR Detect** surveillance system - for operations managers.
- **Training sessions** are based on a practical and theoretical part. The joint fitter shall install the joints that will be part of a certificate. The joint fitter will be assessed on the practical joint installation and shall as well pass a theoretical test to achieve a certificate.
- **Supervisors** will be trained in what to look for in the trench. A supervisor shall be able to assess if a joint installation is done correctly.
- Participants receive **certificates** as proof of their training and skills.
- For joint fitters, the validity of a certificate is limited to 3 years and **recertification** is needed to keep them up-dated on the latest news and optimal use of the LOGSTOR system.
- **Tailor-made courses** depending on specific projects and demands are optional.
- **Training on the jobsite** and at customers' premises are optional.
