

Experience and Flexibility

Time span from decision of project to start of implementation as well as the windows for installation are becoming more and more narrow. Production capability from supplier is therefore a must. Materials must arrive in right quantity and quality, at right time and at the right place. Planning experience and Logistic flexibility is therefore extremely important!

What's in it for you? You can trust us with your project! The classic challenge for installation of buried pipelines where no one exactly knows what is in the ground before excavation is done, can lead to overnight changes of a project. Experience and Flexibility in all its layers is therefore a must.

EXPERIENCE AND FLEXIBILITY IS A CRUCIAL BENEFIT

Every day, our intention is to improve and optimize every aspect of the system from design to delivery. With this in mind, we aim to support the right investment that will secure the quality and health of our customers' network and energy investments far into the future. This requires the right competencies:

Experience and Flexibility (Production)

- Possibility to **delegate standard production to other sites** or production lines to ensure that the project production can be prioritized.
- **Flexibility to mitigate risks** by production order rescheduling between lines and manufacturing sites.
- **Advanced planning tools** to manage future sales forecast and future safety stocks.
- Advanced forecasting methods using SAP and CRM.
- High reliability of **delivery performance on confirmed orders (> 98%)**.
- **Experienced production planning teams** located in four countries.
- **Experienced operators in all production sites** within DH, Industry and O&G products.
- For large and more complex projects with execution over a longer time period, we dedicate separate production teams to produce material for such projects in order to ensure stable and reliable production quality and make sure that our workforce is optimal prepared to execute in production
- **Large and differentiated range of sub-suppliers.**
- Clear objectives and continuously **measuring more key-figures on delivery service.**

Experience and Flexibility (Logistics)

- Dedicated and **competent transport planning team** with extensive knowledge of truck and containers utilization.
- **Highly qualified warehouse teams** focused on safety and product quality.
- Effective tools measuring on time truck arrival and departure (slot booking system).
- We use **several forwarding agents** to make sure we always have capacity - and to our forwarders we are an important player due to the size of our contracts.
- LOGSTOR uses SAP as ERP system for **planning in all steps of handling of orders** and throughout the organization.
- **Large warehouse capacity** available.
- High standard regarding **safety in loading and unloading** of trucks.
- **Customized trucks** including trucks with crane for delivery of pipes in bigger dimension.
- **Effect of synergies and scale** are in cooperation with our transport companies leveraged and **integrated** in our transport set-up.
